

Luminaire Installation Instructions

1. Turn off power at the wall.
2. For additional safety turn off power at the meter box.
3. Ensure Halogen bulb is cool to touch.
4. Pull out the existing light fixture. The fixture has strong clips on the back. Take care and ensure no damage is done to the ceiling.

5. Once fixture is removed gently pull out transformer and look for GPO (General Power Outlet) in ceiling. If no GPO is present, the lights are hard wired and replacement will need to be made by a qualified electrician.

6. Remove plug from GPO and replace with plug from new eplighting luminaire.

7. Push cord and new transformer into roof cavity. Ensure wires and transformer are not sitting over the cut-out.

8. Hold clips back and insert one side of light into cut out.

9. Hold back second clip and ensure new luminaire is centred and flush.

10. Eplighting luminaire installed.

11. Eplighting luminaire ON.
