Step 1: Find an even piece of ground, stake out your tent and assemble the poles. Be sure the longer pole set is at the front of the tent for a quick pitch.

Step 2: Making sure the Non-rotating Elbows™ with H-Clip™ are facing in towards the body of the tent, insert the Ball Connectors™ at the ends of the poles into the tent’s Jake’s Foot™ attachments.

Step 3: Connect the front and back H-Clips™ to the Non-rotating Elbows™, then connect the remaining Ultralight Clips™ to the poles.

Step 4: Lay the rain fly over the tent and connect the small side-release buckles on the back and front of the tent. Next secure the rain fly to the front bar of the Jake’s Foot™ attachment, stake out the vestibule and admire your new tent.

In order to familiarize yourself with your new tent, we recommend you “test pitch” it before embarking on your wilderness adventure. For more helpful tips, go to www.sierradesigns.com/tents.html

Light Year 1-Pitching Instructions
